

SASKI CRESCENT

Naturally,
your place

Completely new and surprising? **Naturally!**

Everyone appreciates convenience, exciting
architecture and prestigious locations

Have you ever thought about a workplace that is healthy,
comfortable and environmentally friendly, where people want
to work and stay? The new Saski Crescent will surprise you
from every perspective. Modernization and the key changes
and technology applied made it born again!

Its design is made up by top-quality materials combining
elegant black with the contrasting light of semi-precious
copper, creating, in the common areas, an inspiring world
of understated elegance and subdued timelessness.

Naturally,
your place

The new Lobby is a place
for coffee and a moment
to breathe.

The location of your dreams?

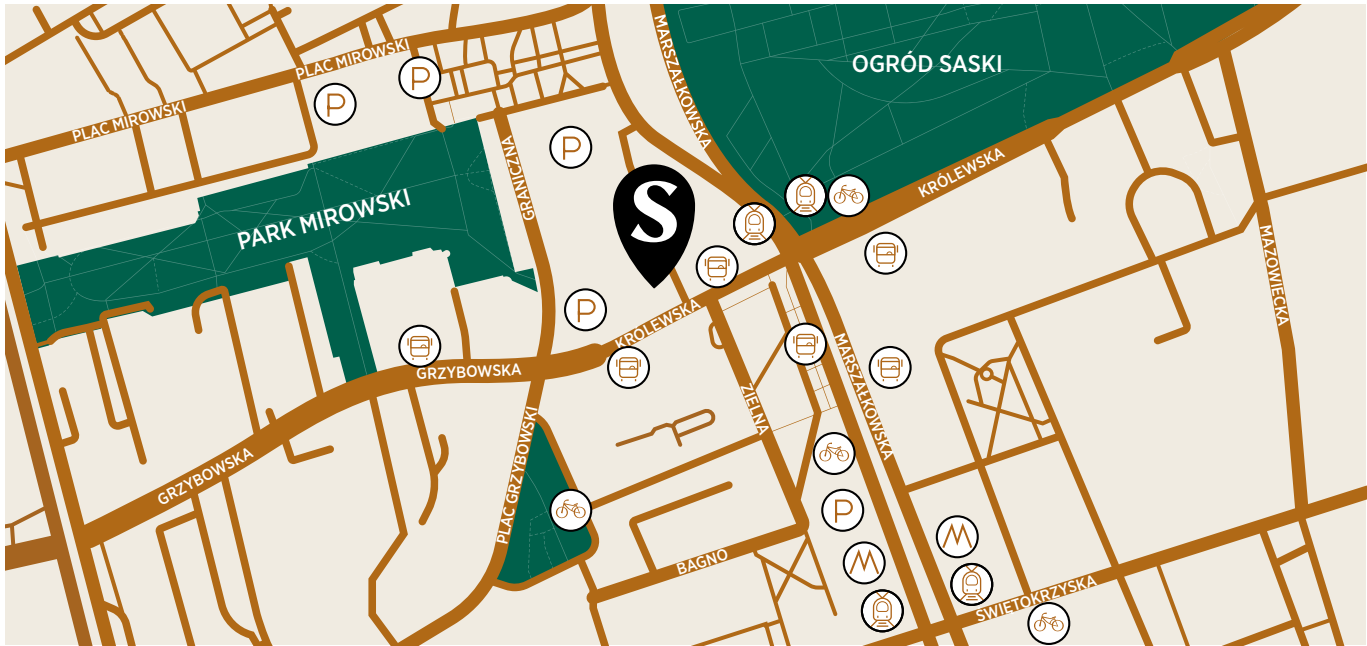

Naturally!

It is hard to find such a location in the very center of the capital, in the heart of the Śródmieście district at Marszałkowska Street, with excellent access (numerous tram and bus lines and a 5-minute walk to a station with two intersecting subway lines).

And at the same time, literally right next door stretches the beautiful, historic, overflowing with greenery Saxon Garden (Ogród Saski), where you can take a breather in between classes, do some work out in nature or recharge your batteries after an intense day.

Combination of original
spaces with elegance
and comfort.

More environmentally friendly?

Naturally!

What we do for the planet, we do for ourselves. That's why in the building we used state-of-the-art environmentally friendly solutions. Solar panels powering common areas or energy-efficient LED lighting are just some examples.

In spring and summer, you can relax among the lush greenery on the accessible green roof and taste the honey produced by the bees living there in hives.

The low carbon footprint of the building is guaranteed by 100% green energy.

makes every part of the
building feel good.

ESG - care for health and the environment?

Naturally!

Modernity is all about taking care of the health and comfort of the people working in the office building. To achieve this, we used state-of-the-art technological solutions.

Here you will be able to enjoy features such as freshly filtered water, constant air parameters or smart office technologies.

The building will also have common areas supporting activity and personal development, which will include a gym and facilities for cyclists.

Functionality

The modernization of the Saski Crescent building is aimed at both human comfort and functionality, supporting environmentally and climate-friendly operation of the building.

BMS

Modernized systems, such as a state-of-the-art digital building management system (BMS), smart meters, and new technologies ensuring optimal ventilation quality, overall thermal comfort and energy-efficient lighting, are expected to lead to significant improvements in the building's energy efficiency and tenant comfort.

30%

The renovation process is expected to lead to a 30% reduction in the building's primary energy demand (PED), resulting in energy consumption 40% below the European average as defined by the Deepki ESG Index (index-esg.com).

Taxonomy

The planned PED reduction is in line with the Technical Screening Criteria for the renovation of existing buildings set forth in the EU Taxonomy Regulation.
